

Literacy + Numeracy = Word Problems

Today we will engage in a collaborative math lesson using our iPads to facilitate some of our learning.

1. **Sam's Problem:** Please listen to the opening lecture that I will be giving. If you want/ need to watch the opening lesson again. You can see it in [Schoology](#).
2. **Jeong's Problem:** Please download Jeong's Problem to your iPad through [Schoology](#). Please work on your iPad in Educreations to solve the problem. Be prepared to explain your answer.
3. **Discussion:** Find a partner and share your answer with them. Each of you take turns explaining your answer. Did you get the same answer? Did you use the same process? If not, please work through the problem together and come to a consensus about the correct process and answer.
4. **Sharing your answer:** When your group is finished, please raise your hand. Be prepared to share your answer with the class. You will project your iPad on the screen with AirPlay.
5. **Your Problem:** Now you will write a word problem of your own. Record the solution in Educreations and share it with me via Instashare.
